

**iStomp, the pedal that changes:
*everything.***

Load, Disconnect, and Play

The iStomp is the world's first smart pedal; a single effect pedal that can change from one effect into an entirely different effect by connecting your iPod touch, iPhone, or iPad. In about the same time it takes to download a song you can load any of the great sounding e-pedals to your iStomp; disconnect and start playing your new pedal. It's that easy. Change the way you look at pedals by getting the pedal you can change.
