

H.264 Encoders

NMX-ENC-1100, Multi-Format Input (FG3201-01)

NMX-ENC-1105, Multi-Format + SDI Input (FG3201-02)

Overview

AMX H.264 Encoders connect directly to sources including PCs, cameras and set-top boxes and provide the on-ramp to stream the video on a network. Once video is on the network, it can be played back in a variety of situations such as on displays throughout a building, in a window within a digital signage message, or using a network media solution like AMX's Vision2. These robust encoders offer standardized, bandwidth-efficient encoding for SD and HD sources.

Common Applications

- Use H.264 Encoders to stream live TV to any digital signage player that support streaming video to provide live video within a message
- Connect an H.264 Encoder to a camera to capture lectures or training to make it available live and to record it for playback using a network media solutions such as Vision2
- Use H.264 Encoders to stream events such as all hands meetings, press conferences or earnings calls to a variety of audiences watching live throughout the world on conference room displays, PCs or mobile phones

Features

- **Multi-Format Video Input** - The NMX-ENC-1100 and NMX-ENC-1105 both feature a multi-format input to support digital and analog video sources
- **SD-SDI and HD-SDI Support** - The NMX-ENC-1105 features an SDI input
- **Audio/Video Pass Through** - Allows encoders to be daisy chained together for low and high bandwidth streams, or to monitor your encoded source
- **Built-in Ethernet Switch** - Install an encoder along with other Ethernet-based devices such as an Enova DVX or Modero Touch Panel in a location without having to install additional Ethernet outlets
- **Audio Level Meter** - The front of the encoders feature an audio level meter making it easy to validate that user audio is being picked up
