23	48	STEREO 2WAY	2x4
24	49	FULL RANGE	2x6
25	50	DUAL PASSIVE	2x2

Important Note!

The above listed Presets are to be used as a starting point only! The Presets named after specific speaker models do contain speaker tuning parameters, but **do not contain amplifier tunings!** Therefore, if your amps are listed in the System Setup Wizard, it is recommended to create your Preset using the System Setup Wizard instead of using one of these Preset Templates.

If your amplifiers are not listed in the System Setup Wizard, the gain structure to the amps and limiter parameters (amplifier tunings) will need to be manually configured. Please visit the dbx FAQs at <http://www.dbxpro.com/FAQs/index.php> for more information on manually configuring the gain structure of a sound system.
