THE ONLY EFFECTS OF THIS MAGNITUDE

Each algorithm can be run in mono, stereo or mono in/stereo out. We've taken the time to add Input, Output and Feedback Meters in addition to Stereo/Phase metering. The most noticeable feature, however, is center screen in a multi-dimensional realtime display. With three animated screens to choose from, all showing different realtime visualizations of the algorithm to help you shape your sound.

With a wide array of adjustable parameters, you have the option to take the preset as it's carefully been crafted, or do further tweaking of your own and save it off once you've compared it with the original. You'll also have the ability to load that preset into a different DAW.

The PCM Native Effects Bundle is a fully functional cross-platform plug-in solution. It has been designed with flexibility to fit into the hardware/software platform of your choice.
